ICE Tips and Tricks (student)
—— Self Enrollment

In response to many requests from ICE users regarding students being able to audit module areas, ICE now can support student self enrollment where the module teacher chooses to provide a key to such students. Once the students get the key, they can self enroll into the teacher's module as a guest user.

*Be aware that these self enrolled students will only make use of a special **guest** role which means **they will have very limited permissions within the module area**. For example, they can view the module's contents including documents, image, videos, etc. as well as download files and folders, but they can't view or post in discussion forums, upload or participate in interactive activities such as Assignment, Attendance, Choice, Quiz and so on.*

How to enroll myself to a module?

Be aware that you should get the permission from the module teacher before you do so. Please contact the teacher for the enrollment key.

1. Find the module.

2. Type in the key to enroll yourself.
